RECENT PERFORMANCE HIGHLIGHTS

Ramp-Up & Early Impact (FY25H1)

- Achieved **4.52 CSAT** during ramp-up, with all feedback rated 4 or 5.
- Closed **37 tickets** post-onboarding, consistently hitting the team's 1-per-day target.
- **Completed onboarding** in cloud integration and ramped up across Marketplace Basics, Applications, and Licensing within **six months.**
- **Joined Queue Master and disturbed (on-call) rotations ahead of schedule**, taking on high-priority, ambiguous work early.

High-Performance Delivery (FY25H2)

- Delivered a **566% increase in ticket volume**, resolving **233** tickets with **100% TTR and 5.0 CSAT.**
- **Ranked Top 4 globally and in APAC** for support ticket handling across 6 consecutive months.
- Filed **43+ JAC** (bug-fix or suggestion) tickets to improve platform reliability and developer experience.
- **Led FedRAMP enablement**: onboarded **34** partners and registered **40** apps
- Shipped new onboarding guides, internal documentation, and launched platform tooling improvements.
- Initiated automation projects, including Obsdeck integration for traceability and root cause analysis.
- **Completed Forge platform and cloud/server training**, expanding capability across SaaS architecture.
- Contributed to 2 ShipIt (Hackathon) projects, driving system efficiency and team visibility.

PROFILE

Technically strong and people-focused support engineer with experience in platform setup, developer enablement, and cross-team troubleshooting. I bring a solid background in SaaS systems and a record of earning trust through reliability, ownership, and high-quality support.

I began in Workplace Technology and grew into a Developer Support Engineer, helping global teams build and maintain apps and integrations across a large SaaS platform. This work sharpened my skills with REST APIs, webhooks, HAR reviews, and identity standards like OAuth, SAML, and JWT–while strengthening my partnership with product and engineering to resolve tough issues.

I've improved the wider support experience by shaping clear docs, onboarding guides, and internal tools. I enjoy turning complex ideas into simple language and finding scalable ways to make systems and people work better together.

I thrive in fast-moving settings where I can streamline support, boost platform usability, and stand up for end users with thoughtful, technical solutions. Canva's scale and ambition make it a great place to build impactful customer support systems, and I'm excited to bring my SaaS platform experience to a team that values problem-solving and continuous improvement.

WORK EXPERIENCE

TECHNICAL SUPPORT ENGINEER

Canva October 2025 - Present

- Delivered technical support to Canvanauts and partners through in-person, remote, and asynchronous channels, addressing hardware, software, and collaboration tool issues with prompt and friendly service focused on enhancing the user experience.
- Acted as the primary resource for tools such as Slack, Workspace, and Mural, managing setup and troubleshooting to ensure teams remain productive.
- Functioned as an internal systems engineer, enabling Okta SCIM apps for seamless system integrations.
- Promoted the adoption of AI in monitoring tools to enhance system efficiency and boost productivity performance.

DEVELOPER SUPPORT ENGINEER

Atlassian | July 2024 - July 2025

Started in technical support at Atlassian, then moved into a permanent Developer Support Engineer role–deepening my skills in cloud migrations, developer tools, and platform operations, and fueling my drive to solve complex, people-process-technology problems.

Key Responsibilities:
• Onboarded into the Ecosystem Support team and built strong knowledge of developer tools, cloud platforms, and marketplace integrations to support a global builder base.
• Troubleshot apps and integrations across cloud and server environments, covering REST APIs, webhooks, and auth flows (OAuth, SAML, JWT).
• Partnered with product and engineering to resolve complex incidents as an escalation point.
• Used browser tools and HAR reviews to diagnose front-end and API issues; fed insights into docs and playbooks.
• Guided partners on SDK changes and API migrations with clear, practical advice.
• Wrote light JavaScript to improve internal tooling and early automation.
• Managed a high-volume queue with clear priorities and steady communication.
• Led and supported FedRAMP readiness and onboarding tasks, coordinating with compliance, security, and product to meet control requirements and keep developers unblocked.
• Created onboarding and enablement resources to improve team consistency across locations.

EXPERTISE

SaaS Platform Support & Tooling
Experienced in configuring, integrating, and optimising third-party developer and support platforms, including REST APIs, identity/auth protocols, and incident tooling.

Developer Experience & Technical Support
Strong background in web and macOS support, cloud integrations, and developer enablement – with a focus on scalable, high-quality service delivery.

Cross-Functional Collaboration
Worked closely with engineering, product, compliance, and vendor teams to deliver technical solutions across platform, tooling, and compliance initiatives (e.g. FedRAMP, Forge, JAC).

Process Improvement & Operational Efficiency
Proven ability to identify workflow gaps, implement internal tooling, and streamline support systems through proactive analysis and scripting.

Knowledge Sharing & Enablement
Skilled in creating documentation, onboarding materials, and async walkthroughs (e.g. Loom) to support internal teams and global developer audiences.

PROFESSIONAL STRENGTHS

Collaborative Communication
Clear, confident communicator with strong verbal, written, and presentation skills. Comfortable engaging cross-functionally across product, engineering, support, and vendor teams to align on solutions and improve outcomes.

Analytical Problem-Solving
High technical aptitude with a structured, proactive approach to troubleshooting and resolving complex technical issues. Applies systems thinking to identify root causes and propose scalable improvements.

User-Centered Support Mindset
Empathetic, patient, and service-driven – focused on delivering thoughtful, high-quality support experiences and fostering strong stakeholder relationships.

Self-Management & Agility
Highly organised and adaptable. Thrives in fast-paced, high-volume environments with shifting priorities, balancing autonomy and collaboration to meet deadlines and exceed expectations.

Initiative, Ownership & Continuous Improvement
Takes initiative to drive outcomes, improve tooling, and enhance team processes. Confident decision-maker with a strong sense of ownership, quality, and accountability.

SENIOR TECHNICAL SUPPORT ANAYLST

Atlassian | January 2023 - July 2024

- Provided technical support to Atlassian employees and external stakeholders across in-person, remote, and async channels – resolving hardware, software, and collaboration tool issues with a focus on responsiveness and user experience.
- Supported macOS environments and meeting room technology (Zoom Rooms, digital signage), contributing to consistent and scalable IT operations across hybrid teams.
- Acted as a key resource for tools like Slack, Google Workspace, and Mural, supporting configuration and troubleshooting to enable team productivity.
- Collaborated cross-functionally with Engineering, Workplace Tech, and the global Service Desk to resolve complex issues and maintain high satisfaction.
- Created and maintained internal documentation, contributing to self-service knowledge bases and onboarding resources for distributed teams.
- Participated in global tech initiatives to improve system consistency, identify root causes, and streamline support workflows.

OSS TECHNICAL ENGINEER

Peace Of Mind Technology | 2021 - 2022

A workplace technology specialist who seek to make the critical connections between property, facilities, and information communications technology teams for a seamless and unrivalled experience of the modern workplace.

- Provided on-site client support and troubleshooting for user applications, including Zoom and Microsoft Teams.
- Delivered on-site event support using modern collaboration tools such as Zoom, Microsoft Teams, Webex, and Workplace by Facebook.
- Prepared preventative maintenance documentation to ensure consistent system performance.
- Facilitated on-site training sessions for both administrators and end users.
- Completed project documentation to support system migrations and implementations.
- Installed AV and telecommunication devices for unified communications environments.
- Interpreted schematics to identify and resolve server-related issues.
- Collaborated closely with Sales Engineering and IT teams to align technology solutions with client needs.
- Provided helpdesk support in line with SLA requirements, ensuring timely and effective issue resolution.

ELECTRONIC TECHNICIAN

Long Range Systems Australia | 2021 - 2022

Provider of guest and staff paging systems for the hospitality and telecom sectors.

- Repaired and tested LRS equipment (e.g. pagers, peripherals) per manufacturing standards.
- Used manual, mechanical, and electrical tools for diagnostics and hardware servicing.
- Programmed/reprogrammed devices using Assembly and Java.
- Conducted QA checks on repaired components, including printed circuit boards (PCBs).
- Delivered high-quality technical support and problem resolution to clients.
- Supported new technology rollouts and collaborated with Sales on service needs.
- Consistently met KPIs for repair volume and turnaround time.
- Contributed to process improvements through regular feedback and product suggestions.

IT TECHNICAL SUPPORT

Clinix Health Group (South Africa) | 2016 - 2017

Healthcare provider delivering affordable care across underserved communities.

- Delivered first-line technical support across 9 hospital sites via in-person, phone, and remote channels.
- Resolved helpdesk tickets within SLA; supported Windows, macOS, and other platforms.
- Maintained and troubleshot office hardware, including printers, servers, phones, and AV systems.
- Performed data migration and reconciliation from Pastel to SAP systems.
- Managed hardware/software inventory and assisted in system upkeep.
- Oversaw and supported a team of 3 direct reports.
- Maintained boardroom AV equipment, including firmware updates and teleconferencing setup.

IT SKILLS

Operating Systems & Platforms
Proficient with macOS, Windows, Linux, iOS, and Android.

Productivity & Office Suites
Advanced knowledge of Microsoft Office and Google Workspace.

Email & Communication Platforms
Experienced with Outlook, Gmail, Slack, Microsoft Teams, Skype for Business, Webex, Zoom, and Google Meet.

Collaboration & Ticketing Tools
Skilled in using ticketing systems for L2 support and remote troubleshooting; strong experience in async and real-time support environments.

Video Conferencing & AV
Practical experience supporting Zoom, Webex, and other video conferencing platforms.

Programming & Scripting
Exposure to Java, JavaScript, Curl, and Assembly Language; understanding of application development fundamentals.

Networking & Systems
Basic knowledge of IP networking and infrastructure concepts; familiar with web applications and system-level troubleshooting.

Support Tooling & Diagnostics
Obsdeck, HAR file analysis, REST API troubleshooting, Jira, Confluence.

Platform Knowledge & Protocols
OAuth, JWT, SAML, Webhooks, Forge/Connect app architecture.

Incident & Queue Management
Queue rotations, incident response, stakeholder comms, escalation workflows (Atlassian internal training).

Scripting & Automation
Basic scripting in Python, JavaScript, Bash; debugging custom integrations.

Documentation & Enablement
IKB/WKTB contributions, onboarding resources, async training materials (e.g. Loom).

HOBBIES & INTERESTS

Tennis
Technology
Reading
Music

ELECTRONIC TECHNICIAN

Trident Enterprise & Consulting (South Africa) | 2015 - 2018

Consulting firm specializing in ICT equipment, AV installations, and home automation.

- Provided hardware/software support and troubleshooting across client systems.
- Managed repairs, replacements, and liaised with sales for service coordination.
- Installed software, configured systems, and supported employee onboarding.
- Maintained ticketing system and monitored systems for performance issues.
- Delivered AV installations for corporate boardrooms.
- Programmed home and commercial automation solutions (Crestron, Control4, Dante, Clipsal).

EDUCATION

DIPLOMA OF ELECTRONIC AND COMMUNICATION ENGINEERING

TAFE NSW, 2018 – 2022

Focused on digital systems, signal processing, electronics, communication protocols, and applied engineering principles.

CERTIFICATIONS & TECHNICAL TRAINING

SAP Business Objects Cloud – Implementation
Gained knowledge in implementing cloud-based analytics solutions, including framework integration, planning essentials, and process optimization for SAP BusinessObjects Cloud.

Google Cloud OnBoard – Implementation Certification
Covered core cloud computing concepts, infrastructure, and Google Cloud services through technical demonstrations and foundational architectural overviews.

CompTIA A+ (220-901/902)
Learned core skills in computer hardware, microprocessors, RAM, BIOS, PC setup and maintenance, and troubleshooting principles for desktop environments.

CompTIA Network+ (N+)
Acquired foundational knowledge in configuring, managing, and troubleshooting wired and wireless networks, including IP addressing, routing, and network security.

Windows Server 2016 – Active Directory & Hyper-V Configuration
Practical training in deploying and managing Active Directory Domain Services and configuring virtual machines using Hyper-V.

Project Management Simplified – Project Management Institute (PMI)
Introduced to essential project management concepts including communication planning, time management, problem-solving, project integration, and risk handling.

IT Service Desk – Customer Service Fundamentals
Focused on delivering outstanding customer service within IT service environments, including communication techniques, positive language, time management, and increasing user satisfaction.

Jamf 100 – Apple Device & MDM Management
Foundational training in Mac device management through Jamf, including MDM principles, deployment best practices, and Apple ecosystem configurations.

ITSM – Atlassian Administration
Overview of IT Service Management practices using Atlassian tools; includes ticketing, incident, and change management workflows.

Jira Administration
Hands-on experience configuring Jira projects, workflows, permission schemes, custom fields, and user roles to support team collaboration and agile methodologies.

Confluence Administration
Skills in managing Confluence spaces, setting user permissions, and configuring templates to support documentation and knowledge management.

Okta SSO Administration
Experience administering single sign-on (SSO) configurations, managing user authentication policies, and integrating applications securely through Okta.
